PROJECTS

MAIN PROJECT

Speech emotional recognition

An emotional speech recognizer is a technology designed to identify and analyze the emotions conveyed within spoken language. It typically involves natural language processing (NLP) and machine learning techniques to interpret the emotional content of speech.

MINI PROJECT

Medicine Reminder

A Medicine reminder is a helpful tool, often in the form of an app or device, that assists individuals in managing their medication schedules. It sends timely alerts and notifications to remind users to take their prescribed medications, helping to ensure adherence to treatment plans and promoting better health outcomes.
